

ALEX MORGAN

Data analyst turning operational data into self-serve Power BI reporting with SQL, dbt and Snowflake

Manchester, UK | +44 7700 900123 | alex.morgan@example.com | github.com/alexmorgan-example | linkedin.com/in/alex-morgan-example | alexmorgan.example.com

SUMMARY

Data analyst building the reporting, forecasts and data models that operations and finance teams rely on. Owns problems end to end, from scoping with stakeholders to explaining results.

EXPERIENCE

Data Analyst

Mar 2022 – Present

BrightCart Ltd

Manchester, UK

- Cut weekly sales reporting from 6 hours to 45 minutes by rebuilding 12 Excel reports as one Power BI dashboard on SQL views in Snowflake.
- Reduced failed nightly data loads from 9 a month to 1 by moving 14 ETL jobs from cron scripts to Airflow with retries and Slack alerting.
- Introduced dimensional modelling with the company's first star schema in dbt, giving finance and product a single definition of active customer.
- Lowered Snowflake compute cost by 30% by clustering the largest tables and suspending idle warehouses.
- Forecast weekly order volume within 5% error with a Python Prophet model that operations use for warehouse staffing.
- Lowered ad-hoc churn questions from finance from about 20 to 3 a week by publishing a data dictionary and FAQ for the churn model.

Junior Business Analyst

Sep 2019 – Feb 2022

NorthPeak Insurance

Leeds, UK

- Identified £140k of duplicate supplier payments by building a matching query across 3 payment systems and reviewing exceptions with finance.
- Built a Tableau dashboard of claims handling time used by 40 team leads, modelling claims events in SQL.
- Automated the claims backlog report with Python scheduled jobs, moving it from weekly to daily delivery.
- Documented 25 core reporting tables in a shared data dictionary, agreeing definitions with the data governance group.

PROJECTS

LLM support-ticket triage | *Python, Large Language Models*

- Cut monthly ticket analysis from 3 days to 4 hours with a Python tool that uses an LLM API to tag 4,000 public support tickets by theme.
- Validated the LLM's theme tags by checking a sample of tickets by hand.

Open transit delays | *Python, Pandas, DuckDB, Streamlit*

- Identified the 10 most delayed bus routes in 2 million public arrival records, publishing the findings as a Streamlit app.
- Transformed the open arrival data in Pandas and queried it with DuckDB.

dbt date macros | *dbt, SQL, GitHub Actions, CI/CD*

- Published an open-source package of 8 tested date macros, running the test suite on every pull request with GitHub Actions.

EDUCATION

BSc Mathematics

Sep 2016 – Jun 2019

University of Leeds

Leeds, UK

Relevant Coursework: Probability & Statistics, Statistical Modelling, Linear Algebra, Databases

SKILLS

Languages: SQL, Python, DAX

BI & Visualisation: Power BI, Tableau, Excel, Streamlit

Data Platforms: Snowflake, dbt, Airflow, DuckDB, Pandas

Methods: Dimensional Modelling, Star Schema, Forecasting, Data Governance

Engineering: Git, GitHub Actions, CI/CD, Code Review

Ways of Working: Stakeholder Management, Data Storytelling

AI: Large Language Models

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate — Microsoft, May 2023
- dbt Fundamentals — dbt Labs, Feb 2024
- SnowPro Core Certification — Snowflake, Sep 2024

ACHIEVEMENTS

Hackathons & Competitions: Northern Data Hackathon 2021, Manchester Open Data Challenge 2023
